

UI Exercises

1.1) Create a simple window titled “My First Tkinter App” with a size of 300x200. Add a Label in the center that says “Welcome to Tkinter!”

1.2) Add a button to Task 1.1 labelled “Close” that closes the window when clicked.

2) Create an interface with:

- A Label that says “Enter your name: “
- An Entry field for typing a name
- A button labelled “Greet Me!”

When the button is clicked, display a message like “Hello, <name>!” below the button using another Label.

3) Create a small counter app:

- A Label showing the current count (starting at 0)
- 2 buttons: “Increase” and “Decrease”
- Update the counter whenever a button is clicked

4) Create a window with 3 coloured sections using Frames:

- A red top bar (height 50px)
- A green centre area
- A blue bottom bar (height 50px)

5) Create a basic calculator that:

- Has an Entry field to display numbers
- Contains buttons 0-9, +, -, *, /, and = arranged in a grid
- Evaluates expressions when = is pressed (use eval() carefully)
- Clears the input field when “C” is pressed
